## JOHNSON TO SEEK \$9-BILLION MORE FOR VIETNAM WAR

Funds Would Raise Defense  
Budget to \$67-Billion in  
Current Fiscal Year

### TAX OUTLOOK UNCERTAIN

McNamara Confirms Soviet  
Is Planning More Missiles  
Than U. S. Expected

By MAX FRANKEL

Special to The New York Times

AUSTIN, Tex., Dec. 6—President Johnson disclosed today that he would ask Congress to appropriate \$9-billion to \$10-billion more to pay for the war in Vietnam in the current fiscal year.

Mr. Johnson declined to project from this figure an estimate of the total cost of the war in the fiscal year, ending next June 30. But the new funds would raise the total defense budget to from \$67-billion to \$68-billion.

This in turn would raise total Government expenses to about \$127-billion against an expected income of about \$117-billion.

The President said he had not yet decided whether to seek a tax increase to pay for the indicated deficit of \$10-billion and refused even to speculate about his policy decision.

#### Budget Review Is Held

The military budget for the fiscal year 1967, as well as the fiscal year 1968, which starts next July 1, was reviewed by Mr. Johnson here today with Defense Secretary Robert S. McNamara, Deputy Defense Secretary Cyrus R. Vance, the members of the Joint Chiefs of Staff and Walt W. Rostow, special assistant to the President.

They were said to have made "substantial" progress in defense planning, but a final figure for estimated costs in 1968 will not be possible until Mr. Johnson resolves debate about several specific weapons systems. The indications are that military spending in the fiscal year 1968 will exceed \$70-billion and will probably exceed \$75-billion.

Mr. Johnson said that he hoped to submit a complete budget for the fiscal year 1968 covering estimated costs through June 30 that year, thus avoiding the need for the kind of supplementary requests made this year and last.

#### Missile Defense Issue

With evidence mounting that the Soviet Union is deploying an antimissile defense system, Mr. Johnson must decide whether to embark on a comparable installation at an ultimate cost of more than \$30-billion. There are signs that he prefers to await technological advances and further evidence of Soviet plans.

At the least, however, he is expected to order further costly work on new offensive weapons, such as the submarine-borne Poseidon missile, that could break through more sophisticated defenses.

Secretary McNamara, discussing the budget with newsmen in the President's office here, also confirmed reports that the

Soviet Union was planning to deploy more long-range missiles than American intelligence estimates had indicated.

But that possibility had been taken into account, Mr. McNamara said, pleading for public understanding of "three major points," as follows:

One. Even if the new intelligence estimate for mid-1968 proves accurate, the United States, without taking any actions beyond those already planned, will continue to have a substantial quantitative and qualitative superiority over the Soviet Union in intercontinental ballistic missiles at that time.

#### Finds Strength Sufficient

"Two. The United States has as many ICBMs today as the latest national intelligence estimate gives the Soviet Union several years hence.

"Three. Our strategic offensive forces have today and will continue to have in the future the capability of absorbing a deliberate first strike and retaliating with sufficient strength to inflict unacceptable damage upon the aggressor or any combination of aggressors."

Mr. McNamara gave no figures of either Soviet or United States missile strength, except to say that the American numerical advantage remained between 3 and 4 to 1.

Intelligence estimates made in 1965 of the number of Soviet long-range missiles in mid-1967 are turning out to be remarkably accurate—to within five or 10 missiles, the Secretary said.

But the 1965 estimates of Soviet missile strength in 1968 now appear to have been too low, he added, although the

change has "no basic impact on our offensive strategic force requirements."

Some military analysts have reported that the Soviet Union is expected to deploy from 650 to 850 long-range missiles in 1968, figures that compare with past estimates of 600.

Mr. McNamara expressed confidence in the American short-range intelligence estimates. Misjudgments occur, he said, in long-range forecasts that go beyond production lead-times and cannot, therefore, be based on concrete evidence.

In discussing the air war over North Vietnam, the Secretary denied that there had been any new pattern of targets for American planes or any increase in defensive action by Soviet-built MIG fighters.

#### Targets Still the Same

Recent bombing attacks near Hanoi have been aimed at lines of communication and supporting facilities, the same kind of targets that have hit for more than a year, including petroleum depots, a vehicle maintenance depot and railroad yards, he said.

The MIG responses have been no greater than in past periods, he said, except for a recent period in which bad weather also held down the number of American raids. The number of losses to MIGs has been very small—one aircraft in the last two weeks—and total losses in relation to the number of raids has not varied "substantially" from past periods, he went on.

Most of the American planes have been lost to conventional ground fire from antiaircraft positions, the Secretary said, but the total losses did not strike him as unusual or abnormal.
